ACKNOWLEDGEMENTS

This publication summarizes basic information concerning Florida's poultry industry. It is intended for the use of poultrymen, allied industries and all others who are interested in poultry production.

Many producers, hatcherymen, marketing agencies and others voluntarily supplied information used to develop these statistics. Their cooperation is sincerely appreciated.

This report is made possible through a cooperative effort of the Florida Crop and Livestock Reporting Service, the Bureau of Market News and the Poultry and Egg Section of the Division of Inspection. The Bureau of Market News has assisted in publishing this bulletin by providing price data and other related statistics. Production and inventory data are official state and USDA statistics prepared by the Florida Crop and Livestock Reporting Service.

This publication was prepared under the direction of Van B. Johnson of the Florida Crop and Livestock Reporting Service.

POULTRY AND EGG SUMMARY

Florida poultrymen received 167 million dollars for broilers, eggs, and other poultry products in 1975. This is an increase of 7 percent from 1974's cash receipts of 156 million dollars. Receipts from the commercial sales of eggs at 102 million dollars were down 6 percent, while those from sales of commercial broilers were up sharply. Cash receipts for other poultry continued to decline. Producers of broilers received 62 million dollars, a 38 percent increase from last year. Other poultry products contributed the remaining portion to total cash receipts.

In 1975, eggs returned an average of 44.1 cents per dozen to producers, down 1.5 cents from the 45.6 cents received the previous year. Broiler prices at 25.5 cents per pound on a liveweight basis, increased 5.6 cents from the 19.9 cents returned to broilermen in 1974.

Following three consecutive years of decline in the average number of layers in Florida farm flocks, layer numbers increased in 1975 to 11,799,000 birds.

The daily rate of lay per 100 layers in 1975 decreased nearly two percentage points to 64.5 eggs. The decrease in rate of lay more than offset the increase in layers, resulting in a slight drop in eggs produced. Production was down from last season's record high of 2.85 billion eggs to 2.78 billion this year.

During 1975 commercial hatcheries produced 116.6 million straight run chicks. Broiler-type chicks at 78.7 million, accounted for nearly two-thirds of the total, with egg-type chicks making up the remaining third. Hatch for broiler-type chicks was virtually the same as last year, while egg-type hatch was down 2 million.

TERMS AND DEFINITIONS

MARKETING YEAR-- Poultry production, price and value statistics since 1970, are reported for the marketing year beginning December 1 through November 30. All statistics prior to 1970 were on a calendar year basis. For comparability, in those tables where monthly data are shown, December entries always refer to the preceding year. All hatch and hatchery placement data are reported on a calendar year basis.

BROILERS are meat-type chickens raised commercially to weights around 2.5-3.5 pounds and usually marketed in 8-10 weeks.

EGGS include both table and hatching eggs. Table egg prices are calculated on a farm basis, cases exchanged. They include all grades and sizes, but exclude charges for hauling, grading or packaging. Prices for hatching eggs are not published separately. Annual egg production, price and value statistics are for table and hatching eggs combined.

OTHER POULTRY cash receipts include chickens, turkeys, turkey eggs and miscellaneous farm poultry products.

CASH RECEIPTS are the returns received by farmers for all sales.

GROSS INCOME includes cash receipts plus the value of home consumption.

CURRENT YEAR data are preliminary and subject to revision.

SURVEY METHODOLOGY--Monthly estimates of hens and pullets of laying age, pullets not yet of laying age, and of egg production are based upon data obtained from a sample of commercial chicken and egg producers. This sample is selected from the universe of Florida poultry management units, and includes approximately 80 percent of the total commercial laying flock. Monthly estimates are expected to be within five percent of the value obtained if a complete enumeration were undertaken each month.

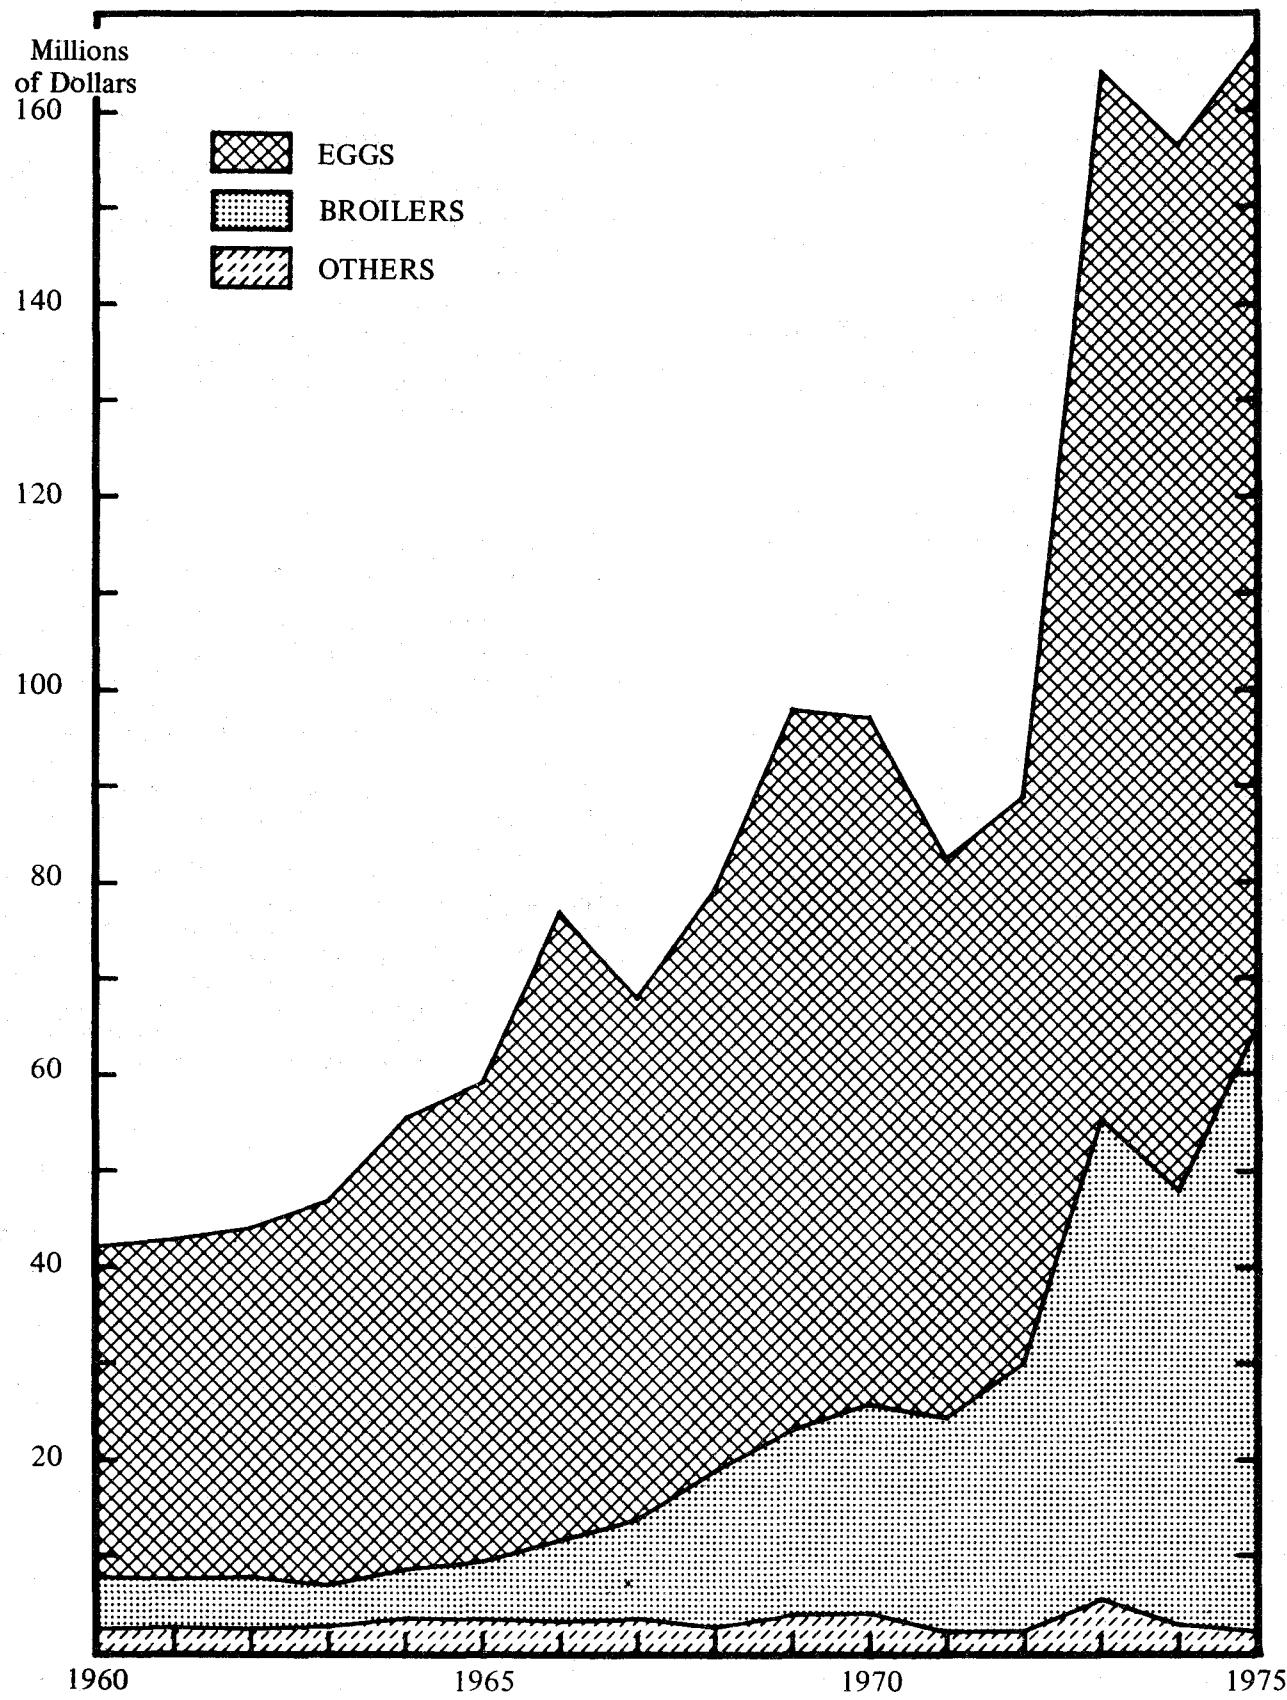

During December of each year all known commercial egg producers in Florida are contacted. This complete enumeration establishes the annual universe of management units. Management units include all independent producers as well as contractors who report for all contractees. The table below shows the stratification of the universe established by the annual surveys of December 1974 and 1975, and the number of units in the samples selected for the monthly surveys in 1975 and 1976.

NUMBER OF MANAGEMENT UNITS IN THE UNIVERSE AND SAMPLE, DECEMBER 1974 AND 1975

STRATA	STRATA BOUNDARIES		NUMBER OF UNITS			
			UNIVERSE		SAMPLE
